

Vladimir Ivanov

Go Developer

I'm a passionate backend software engineer with over 5 years of experience. My expertise lies in the gaming industry, where I have developed Discord bots and modifications for game servers like GS:GO and Minecraft. Over the past 2 years, I have focused on honing my skills in building high-load services using Go. Additionally, I am actively learning DevOps, including Kubernetes (k8s), to enhance my deployment and orchestration capabilities.
